

The Challenge

Toxic workplaces exist in all industries and professions. Modern lifestyles and diets, as well as our inevitable daily exposure to pollutants and chemicals, means that an ever-increasing number of people are looking to cleanse their body systems. Everyone knows that doctors are supposed to heal, not harm their patients. Everyone knows sometimes doctors inadvertently cause harm by prescribing drugs, which can have dangerous side effects, be addictive, or even be lethal. Number 1 culprit is pain killer usage, which has massively increased. Pain killer usage long term can cause severe toxicity to the liver and kidneys. Number 2 is methadone—most risky when combined with other drugs. Number 3 is benzodiazepines—a group of tranquilizer drugs. Long term usage can develop dependence, with a potentially nasty withdrawal syndrome that can be life-threatening. Number 4 is anabolic steroids. Long term use of this drug may cause cardiovascular disease. There have been high rates of accidental drug toxicity. There is also an association between elevated aggression and violence in steroid users, and higher rates of violent causes of death such as homicide and suicide. Prescription drugs long term may be very dangerous for the elderly causing sleep problems, anxiety, memory issues, frequent falls, and depression.

How The Lymph System Works

The lymph system, known as the Tree of Life, drains waste from every cell and organ in the body, including the heart and digestive system. It provides an immune detox defense for any toxins passing through the intestines, skin, respiratory tract and more. The lymph system is vulnerable to the formation of scar tissue and distortion as we age, much like the cardiovascular system. It drains 3 pounds of plaque and other toxins from the brain each year. Poor lymph drain from the brain and central nervous system has been linked to psychological, cognitive and immune concerns. The lymph system moves primarily via muscular contractions or exercise. Lack of regular exercise can congest the brain and the CNS lymphatic channels that drain the brain while you sleep.

Keeping **the lymph system** clean, or “the drains” of the body, is critical to optimal health and longevity. Here’s why: It is both a detox system and nutrient delivery system, and home of the immune system. Life cannot exist without it. It delivers fats as fuel for in-between-meal energy in the form of triglycerides. When the lymph system is not functioning optimally, it is a major cause of fatigue. Any proteins and fats that are too large to enter the bloodstream go undigested into the stomach and small intestine, and then are picked up and processed by the lymph system. This is directly linked to weight gain.

The Solution

Cleansing your **lymph system and blood** with herbs such as those in our **“Lymph & Blood Cleanser”** may better the quality of your health amazingly, may decrease doctor office visits, and may extend your life. These herbs work synergistically to produce powerful cleansing benefits for your body. Toxins can be eliminated. Lymphatic drainage is promoted, and lymph and tissue fluid stimulated. Immune system is boosted and cardiovascular health improves. Blood will receive an abundance of oxygen, greatly benefitting digestion and circulation. Red blood cell production increases, helping cells remove CO₂. Normal blood pressure can be maintained and skin conditions improved.

In addition, drinking lots of alkaline water will bring cleansing oxygen into body cells in about 60 seconds. Purchasing a rebounder and jumping up and down with your arms raised over head helps lymphatic fluid move and greatly improves circulation. This activity helps fight lymphatic congestion. Additionally, please see the associated flier by clicking “Rebounding For Lymphatic Congestion”, which is highly important.

Improve Your Life by Cleansing Your Lymph System and Blood—Your “Tree of Life”

Astragalus

- Produces faster recovery survival rate of compromised immune systems from chemotherapy
- Regulates immunity by increasing white blood cells activity, which engulfs invading organisms
- An adaptogenic herb which enables cancer cells to be “picked up” on the immune system’s radar
- A study concludes that *Astragalus membranaceus* restores immune function in 90% of cancer patients

Echinacea

- Promotes healing of skin wounds
- Anti-inflammatory effect against arthritis
- A natural antibiotic to help fight off colds and flu

Red Root

- Helps to reduce blood clotting
- Helps to improve blood circulation
- Combats a range of lymphatic system disorders
- Excellent herb for those wishing to cleanse their lymphatic system

Hyssop

- Protects the body against infections
- Improves oxygenation throughout the body
- Eliminates parasites in the gastrointestinal tract
- Relieves spasms in the nervous system, muscles, and intestines

Chlorella

- Provides cleansing to the bowel, colon, and liver
- Contains digestive enzymes and elevates growth of healthy bacteria
- Contains high levels of chlorophyll—one of the greatest nutrients for cleansing
- Powerful detox—binds with toxins and pesticides such as PCBs and heavy metals

Broccoli

- Protects against oxidative stress
- Contains chlorophyll—a powerful cleanser beneficial for blood and lymph fluid
- A nutritional powerhouse full of vitamins, minerals, fiber, bioactive compounds and antioxidants

Pau D’Arco

- Helps fight fungal infections and parasitic infections
- Aids in assimilation of nutrients and elimination of wastes

Yellow Dock

- A heavy duty blood cleanser
- Assists the body in eliminating heavy metals
- Powerful antibacterial & antifungal properties, excellent for skin problems

Chaparral

- Great blood purifier and weight loss agent
- Protects healthy cells during heavy metal detoxification
- A powerful antioxidant to neutralize free radicals; anti-viral and anti-inflammatory properties
- A powerful anti-neoplastic (anti-cancer) agent and strong analgesic effects against rheumatoid arthritis

Ginger

- May stimulate blood circulation
- One of the best detoxifying herbs
- Beneficial effects on digestion and circulation—two systems that are tied directly to the lymph system
