Diatomaceous Earth

The Challenge

Many Americans struggle with external body issues such as excess weight, joint pain, unhealthy hair, skin, nails, teeth or low energy levels. But many of these same people do not realize internal body issues can also be plaguing them, such as viruses, toxicity from free radicals, heavy metals or even from parasites.

Not only these issues exist, but also many homes have insect infestations, including those in the garden and those affecting their beloved pets. Wouldn't it be great to have an all-encompassing, non-toxic product that's even safe to consume to tackle all these issues?

The Solution

You may never have heard of diatomaceous earth before, but chances are you've consumed or used plenty of products that contained it. So what is diatomaceous earth? Diatomaceous earth (DE) is a natural product made up of fossilized remains of tiny, aquatic organisms called diatoms. Because the cells of these diatoms were high in a compound called silica, the dried sediment produced from these fossils is also very high in silica. These deposits are found all over the world. The powdered microscopic shells of diatoms have strong negative charges.

As these millions of ground-up powdered silica shells move through the stomach and digestive tract, they attract and absorb bacteria, viruses, fungi, protozoa, pesticides, endotoxins, drug residues, heavy metals and E-coli for both human and animal. These are trapped inside the diatoms and passed out of the body. Also, any larger parasites that happen to be in the digestive tract are "cut up" and killed by the sharp edges of the DE. All of this results in a far more healthy body with less illness and infirmity. People often say, "I just feel better", with one or two teaspoons a day of DE in their favorite juice or liquid. When taken by mouth, DE is used as a source of silica for lowering high cholesterol levels, for relieving constipation, and for improving the health of skin, nails, teeth, bones, and hair. When applied to the skin or teeth, DE is used to brush teeth or remove unwanted dead skin cells.

Other Benefits Include

- Sore joints feel better
- Can lower blood pressure and stabilize blood sugar
- Calms nerves and provides better sleep
- Detoxifies and aids in weight loss
- Flea, tick, lice control for pets and livestock
- Good insecticide in home and garden
- Cleanses digestive tract of parasites in humans and animals

Diatomaceous Earth (DE)—100% Food Grade—Safe to Eat—Non-Toxic
DE has many applications. Some of its uses are as follows:

ORGANIC INSECT CONTROL

Everyone loves the fact that DE is totally drug and chemical free! Not only is DE safe to use, bugs cannot become immune to it as they do with chemicals. DE kills insects by scratching off their waxy protective coating causing them to dehydrate. Most insects die in an hour or so.

Common uses include:

Dust on gardens, flowers, plants, bushes and trees • Apply a 2-inch border around foundation of the house • Sprinkle in and around animal and pet housing • Pour on and down ant hills (including fire ants) • Spread over large areas with a fertilizer spreader or duster • Sprinkle in carpet, furniture, mattresses, etc to kill infestations • Mix with water and spray or whitewash infested areas • Add to stored grain or food-stuffs • Apply in studding during construction to create a permanent bug guard

PETS and LIVESTOCK

Hundreds of reports exist on how DE takes care of fleas, ticks, mites, etc on the animal's outside, and worms and parasites on their inside. This is exciting because DE is non-drug and non-chemical.

Common uses include:

Dust on the coats of dogs and cats for flea, tick and lice control • Add to food each day for worm and parasite control • Add to food for joint, skin, and hair coat health • Add to feed to kill fly larva in manure • Use on birds/poultry for lice and mite control • Apply to moist kennel areas for pest and odor control

HUMAN USE

Many people take food grade DE every day. You might ask, How can something that kills bugs be good for people? Remember, DE kills bugs by scratching them—no chemicals are involved. For people, DE is a source of available silica. Silica is a major mineral we all need that is lacking in our foodstuffs today.

A general recommendation:

1 tablespoon of DE per day in juice, water, applesauce, yogurt, protein shake or liquid of choice

Hundreds of feedback testimonials! This is what people are saying:

- Sore joints feel better
- Lowers cholesterol levels (usually 50-75 points lower)
- Lowers blood pressure levels
- Stabilizes blood sugar levels
- More energy
- Healthier skin—softer, less itching, faster healing, psoriasis gone
- Stronger and healthier nails and hair
- Calms nerves and better sleep
- Aids in weight loss
- Detoxifies
- Cleanses digestive tract of parasites
